bonsoir je n y arrive pas (pièces jointes),j ai contrôlé transfo diode et capacitor recuperés et donc j ai mis le magnetron qui était avec, soit le micro ondes avec circuit ...

A switching side capacitor, albeit of small value, is necessary in order to ensure low impedance to the high frequency switching currents of the converter. As a rule of thumb, this ...

C18, the 470uF capacitor is used to decouple the remainder of the motor control circuit electronics. D7 is used in series with R31 to feed 1.5 Amps for a short period of time to ...

For DC blocking or coupling applications at RF, typically a capacitor with low insertion loss and a good quality or Q-factor is required. Since a capacitor's Q-factor is ...

If there is a stationary charge on the capacitor, we call the force that results "electrostatic," "electro" related to electron, or charge, and "static" because it doesn't change. ...

If a capacitor is used to filter input or output signals in a microcircuit, the available current most likely will be low (milliamperes or less). In this case the initial voltage at the ...

Bonjour, j'aimerais savoir quelles sont les différences entre un moteur électrique et un alternateur sachant qu'ils sont tous deux constitués d'une
