
Cooling system shock absorption in battery cabinet

India's cooling challenge India faces a daunting problem: how to provide access to cooling to its citizens without warming the planet. India has among the most cooling degree ...

Data centres cause accelerating water usage, requiring innovative water circularity solutions; however, collaboration will be critical for their success.

Emissions from the refrigerants, air conditioners and energy used in the cooling industry account for 7% of global greenhouse gas emissions, and are expected to triple ...

A key reason for the high-water consumption is limited water reuse in cooling. During the cooling process, part of the freshwater evaporates, and the remaining water ...

Data centres are responsible for 1% of energy-related greenhouse gas emissions. Here's how to cut those emissions and still deliver on the promise of AI.

Top nature and climate news: Rooftop solar study reveals its climate cooling potential; US pulls out of climate damage fund; Global sea ice hits record low.

Extreme heat, drought and other climate hazards could raise cumulative annual running costs at data centres in operation today by \$3.3 trillion by 2055.
