
Flywheel Energy Storage and Nano-ion Batteries

This previous question explains what a flywheel does and why it is needed. That explanation means that the flywheel needs a certain amount of mass to do its job. However, ...

I can't visualise an engine's flywheel turning 33 times per second when the car is set to 2,000 RPM - it seems excessive. Have I misunderstood RPM or is that actually how fast ...

A flywheel serves four main purposes (in most vehicles): It provides mass for rotational inertia to keep the engine in motion It is specifically weighted to provide balance for ...

No grinding, no clicking, just spinning freely, but wouldn't engage flywheel. Not another starter figuring this one was shot, preventing it from engaging the flywheel, and in the ...

The mechanism to engage the flywheel is faulty, probably the solenoid that activates it is either faulty (it moves its internal parts to make contact and so the motor spins, ...

The starter motor has a small gear (the pinion gear) which sticks out on a shaft to engage the flywheel. if the pinion gear doesn't stick out far enough, it will spin but not turn the ...

A flywheel is used to even out impulse, and to store energy (these are both the same thing in reality) An engine, especially when running slowly (such as when starting) has ...
