
Icelandic energy storage power import

Does Iceland have fossil fuels?

Iceland has no significant fossil fuel reserves and imports 100% of its oil and coal. Iceland's energy mix is free of natural gas. The country meets about 85% of its primary energy needs from renewables, namely hydropower and geothermal power. Moreover, Iceland generates almost 100% of its electricity from these two renewable sources (Fig.5).

What is Iceland's energy mix?

Iceland's energy mix is free of natural gas. The country meets about 85% of its primary energy needs from renewables, namely hydropower and geothermal power. Moreover, Iceland generates almost 100% of its electricity from these two renewable sources (Fig.5). Iceland has favorable conditions for the development of wind power.

How much energy does Iceland use?

According to , in 2023, the total production of primary energy in Iceland was 0.069 quadrillion Btu, while consumption was at the level of 0.109 quadrillion Btu. Thus, the share of domestic production in primary energy consumption was about 63.3%. This makes Iceland a country dependent on energy imports.

How does Iceland get its electricity?

This significant achievement is primarily supported by hydropower, contributing more than two-thirds of the total electricity supply from the turquoise waters flowing through the nation's rivers and waterfalls. The remaining close to a third comes from geothermal energy, harnessing the Earth's heat beneath Iceland's volcanic landscape.
